### **ACCESS TO QUALITY PRE-K IN KANSAS LAGS BEHIND OTHER STATES**

*Enrollment Fell in 2015 While Quality Standards Remained Consistent and Funding Increased*

**[NEW YORK, NY]**—Many 3- and 4-year-olds still lack access to high-quality preschool education despite modest gains in enrollment, quality, and funding, according to an [annual report](#) by the nonpartisan National Institute for Early Education Research (NIEER) at Rutgers University. While several states, including New York, made significant progress through a concerted effort to increase enrollment and funding and improve quality, progress is slow and uneven nationally and quality standards are particularly low in some of the nation's largest states like California, Florida and Texas. Despite the relatively good news this year, the rate of progress is so slow that it will take 150 years for the nation to reach 75 percent enrollment in state pre-K even at age 4.

In Kansas, enrollment was down by 134 children in 2014-2015, while Kansas maintained a consistent level of quality— meeting 6 of NIEER's minimum quality standards benchmarks in each of the two pre-K programs, Kansas State Pre-K and Kansas Preschool. Total state funding increased by \$5.6 million (4 percent) when adjusted for inflation, even though enrollment dipped to 8,134 children.

"Kansas's economic future depends on early investment in its youngest citizens," said NIEER Director Steve Barnett. "Ensuring that every child has access to high-quality preschool can help pave the way for their success in school, on the job, and in Kansas communities. If Kansas is to achieve that, the state needs to pursue a program of systematic expansion of state pre-K," he said.

*The State of Preschool* report for the 2014-2015 school year, which includes objective state-by-state profiles and rankings, indicates that urgent action is needed from lawmakers at all levels of government to ensure that every child – particularly those from low-income families – have access to high-quality early education. For the first year, NIEER also analyzed states' early education workforce and Dual Language Learner (DLL) policies, which reveal Kansas' pre-K teachers do not have salary parity with K-3 teachers, even though lead teachers are required to have a Bachelor's degree and early childhood education certification. Kansas is one of ten state pre-K programs that allocate extra dollars to serve DLLs. In addition, home language is used as an eligibility criteria for pre-K enrollment, and enrollment materials are provided in the family's home language in the Kansas Preschool program.

The report finds that for the nation as a whole, total state spending on pre-K programs increased by 10 percent, or \$553 million, over the previous year, bringing state spending in 2014-2015 to over \$6.2 billion. The number of children served by state-funded pre-K increased by 37,167 in 2014-2015, bringing the total to almost 1.4 million children – the largest number of children ever served by state-funded pre-

K. With an average rate of \$4,489, states also made one of the most significant increases in spending per child in recent history.

Despite these gains, the report's findings underscore that those states like California, Florida, and Texas with the largest populations of young children are falling behind—they were among the states that met the fewest quality standards benchmarks, and Texas and Florida also reduced enrollment and spending in 2014-2015. Nationally, enrollment has risen by just one percentage point for both 4- and 3-year olds over five years. The sluggish pace of change disproportionately impacts low-income families.

“We’re encouraged to see several states increasing in enrollment and improving quality, but access to high-quality pre-K in the United States remains low and highly unequal,” said Barnett. “Expanding access to quality pre-K programs is one of the best investments we can make, and it’s critical that we raise and standardize salaries for early education teachers and have strong Dual language Learner policies in states with large Hispanic populations. State governments should increase and stabilize funding for pre-K and raise standards for the benefit of all children.”

*The State of Preschool Report* reviews state-funded pre-K programs on 10 benchmarks of quality standards, including the presence of a qualified instructor, class size, teacher-to-student ratio, presence of an assistant, and length of instruction per day.
